Pixel Pocket Phone UI

A complete pixel-art mobile phone UI kit with a built-in, dependency-free tween animation system.

Unity 2022.3+ / Unity 6 | Built-in & URP | No external dependencies | uGUI + TextMeshPro

Overview

Pixel Pocket Phone UI is a ready-to-use kit for building retro-style smartphone interfaces: home screens, social feeds, contacts, DMs, settings, calls, popups and more. It ships with a large sprite library, **13 ready-made screen & component prefabs**, a demo scene, and a lightweight **tween animation system** so your UI can pop, fade, slide, and sparkle — all without importing any third-party packages.

Requirements

- Unity **2022.3 LTS or newer** (developed on Unity 6).
- Works with **Built-in** and **Universal Render Pipeline** (UI is render-pipeline independent).
- Uses **uGUI** and **TextMeshPro** (included with Unity). No DOTween or other plugins required.

What's Included

CATEGORY	COUNT	CONTENTS
App Icons	15	Calculator, Calendar, Call, Clock, DM, Mail, Map, Music, Notes, Picture, Web and more.
Setting Icons	9	Alarm, Avatar, Language, Privacy, Profile (color variants), Sound.
System Icons	115	Arrows, chevrons, check, search, gear, heart, star, share, trash, and many more.
UI Elements	74	Backgrounds (17), bars (5), buttons (23), controls/inputs (8), deco (7), lists (2), panels (6), thumbnails (6).
Prefabs	13	Ready-made screen & component prefabs (see below) + full demo scene.
Fonts	—	Pretendard (Bold / SemiBold) with TextMeshPro SDF assets, including pixel-styled variants.
Tween System	—	Runtime scripts + editor tools.

213 sprites total.

Screens & Prefabs

Drop any prefab into your Canvas to get a complete, styled screen in one step.

PREFAB	DESCRIPTION
Cover	Cover / title screen.
Home	Home screen with the app-icon grid.
Sns	Social feed — scrollable post list with like toggles.
Contacts	Contact list screen.
DM	Direct message / chat screen with chat bubbles.
Settings	Settings page with toggles, sliders and rows.
Alarm	Alarm / notification screen.
Call	Incoming / outgoing call screen.
Live	Live-streaming screen.
Pop	Popup / dialog overlay.
Component1, Component2	Reusable UI component collections (buttons, inputs, bars, etc.).
SystemIcon	System-icon showcase / palette for quick reference.

Tween Animation System

A tiny, self-contained tween engine (namespace `PixelPocketPhoneUI.Tweening`). A hidden runner is created automatically — nothing to set up in the scene.

Drag-and-drop components

Add via `Add Component ▸ Pixel Pocket UI ▸ Tween`:

COMPONENT	ANIMATES
Pixel Fade Tween	CanvasGroup alpha — popups, alerts, screen fades
Pixel Scale Tween	Scale — pop-in, button press, heartbeat
Pixel Move Tween	Anchored position — slide-in panels, banners
Pixel Rotate Tween	Rotation — loading spinners, icon spin
Pixel Color Tween	Image / Text color — highlight flashes
Pixel Shake Tween	Position shake — error feedback, call buzz

Each component exposes: play trigger (On Enable / On Start / Manual), delay, duration, 20+ easing presets (or a custom AnimationCurve), looping (Restart / PingPong, with count), unscaled time, reverse, and an *On Complete* UnityEvent. A ▶ **Play Preview** button animates it right in the editor — no Play mode needed.

Preset effects

- **Pixel Heart Burst** — little hearts float up and fade out (SNS "like").
- **Pixel Star Burst** — fireworks: stars shoot out, spin, fall, and fade (rewards / celebrations).

Both support a color gradient (2+ colors = random blend), per-particle color variation, size range, and multiple triggers: Toggle, Play On Enable, Repeat (timer), a Button's OnClick, or code.

From code

```
using PixelPocketPhoneUI.Tweening;

canvasGroup.TweenFade(1f, 0.25f).SetEase(PixelEaseType.OutCubic);
panel.transform.TweenScale(Vector3.one, 0.35f).SetEase(PixelEaseType.OutBack);
icon.transform.TweenRotate(new Vector3(0,0,-360f), 1f)
    .SetEase(PixelEaseType.Linear)
    .SetLoop(PixelLoopType.Restart);
```

Editor tools (Tools ▸ Pixel Pocket UI)

- **Apply Sample Animations to Open Scene** — cascade pop-in on app icons, fade+pop on popups.
- **Selection helpers** — add Fade / Scale / Shake / Cascade to selected objects (Undo-friendly).
- **Wire Button to Activate / Deactivate Target** — connect a button's OnClick to show/hide a page, no code.

Quick Start

1. Import the package. Open the `Demo` scene to explore every screen.
2. Drag a screen prefab (Home, Sns, Settings...) into your own Canvas.
3. Add a tween component to any UI object and press ▶ **Play Preview**, or run `Tools ▸ Pixel Pocket UI ▸ Apply Sample Animations`.

See `Scripts/README_Tweening.md` for the full tween reference.

License & Credits

- **System icons & UI components:** original pixel art, hand-crafted by IndigoLay (system icons, buttons, controls, bars, panels, decorations, etc.). Free to use in personal and commercial projects.
- **Some app icons & screen / background / character images:** generated by or with the assistance of AI, included for demo / preview purposes.
- **Font:** Pretendard, licensed under the SIL Open Font License 1.1 (see `Font/OFL.txt`). Included for convenience; it is not sold as part of this package.
- **Scripts:** the tween / animation system was developed with AI assistance, then reviewed, tested, and integrated by IndigoLay.

AI disclosure: System icons and UI components (buttons, controls, bars, panels, decorations, etc.) are all original, hand-crafted pixel art. Some app icons and screen / background / character images were generated by or with the assistance of AI. The tween / animation scripts were created with AI assistance and author-reviewed.
